COVID-19 Bivalent Boosters

COVID-19 bivalent booster vaccines specially designed to protect against original COVID-19 and the most common strains of the Omicron variant are recommended for everyone age 5 and older.

The updated bivalent COVID-19 boosters can help restore protection that has decreased since previous vaccination and provide broader protection against newer variants; specifically, the BA.4 and BA.5 subvariants of Omicron.

All authorized COVID-19 vaccines and boosters are effective in reducing the risk of severe disease, hospitalization and death.

COVID-19 vaccines and boosters are free and available at pharmacies, community health centers, clinics, and other healthcare providers around the state. Vaccination providers can be found at [vaccines.gov](https://www.vaccines.gov)

Bivalent boosters recommended if ...

- Age 5 or older
- Have completed your primary vaccine series
- It has been at least 2 months since your most recent vaccination

Pfizer or Moderna?

Take your pick! Individuals can receive either Pfizer or Moderna regardless of vaccine type they previously received.
